INDICATOR AUTHORS

Dr Joan Ballester, Prof Xavier Basagaña, Jorge Ruiz-Cabrejos

1.2.5 Extreme Weather and Sentiment

1.2.5 EXTREME WEATHER AND SENTIMENT

Climate change-related increases in extreme weather events, including heatwaves and extreme rainfall, pose diverse risks to mental health globally, ranging from altered affective states to elevated mental health-related hospitalisations and suicidality. As the world continues to warm, this indicator

tracks people’s sentiment expressed on social media in relation to extreme weather events.

Health-related data fields that could be used in mock cases, with a data-minimization mindset.
